

Impact Environmental Group – Carbon Reduction & Net Zero Commitment Statement

Overview

Impact Environmental Group (IEG) is committed to developing and implementing a science-aligned carbon reduction strategy that reflects the scale and diversity of our growing operations. Our business encompasses manufacturing, distribution, OEM equipment production, and nationwide field service delivery. As a private equity-backed platform business in a high-growth phase, we recognise the importance of accuracy, transparency, and accountability. Accordingly, we are prioritising the completion of a comprehensive post-acquisition emissions baseline across all facilities and operating divisions before confirming a definitive Net Zero target date.

Current Focus: Establishing a Verified Baseline

IEG is actively undertaking a full inventory of Scope 1 and 2 greenhouse gas emissions, while assessing material Scope 3 categories such as service fleet fuel consumption, transport logistics, and supply chain impacts. This detailed baselining exercise ensures that our future reduction targets will be robust, measurable, and aligned with the evolving structure of our global operations.

Carbon Reduction Measures Already in Progress

Whilst our consolidated baseline is being finalised, IEG has already commenced a range of carbon reduction and efficiency initiatives across our business, including:

- Continuous improvement energy-efficiency projects across manufacturing sites
- Process optimisation and waste reduction within fabrication and OEM operations
- Expansion of routing and logistics optimisation tools across our distribution network
- Service fleet utilisation and telematics assessments to improve vehicle efficiency
- Standardised site-level reporting for electricity, diesel, propane, and natural gas consumption

These measures not only contribute to carbon reduction but also enhance operational efficiency, resilience, and long-term sustainability.

Future Commitment

Upon completion of our consolidated emissions baseline, IEG will:

- Define a science-aligned carbon reduction pathway consistent with our operating model and growth strategy
- Establish measurable, time-bound reduction targets underpinned by verified data
- Set a Net Zero commitment date that reflects both our environmental responsibilities and long-term value creation objectives

IEG remains dedicated to embedding sustainability at the core of our business model, ensuring that our environmental ambitions progress in step with our operational and customer commitments.
